

PROVINCIAL SECRETARIAT FOR URBAN PLANNING
AND ENVIRONMENTAL PROTECTION
BULEVAR MIHAJLA PUPINA 16
21000 NOVI SAD, SERBIA
DATE: 28/06/2018

Based on the contract, Services of analyzing deposited seed (seed bank) of invasive species in soil and nature protected area for project "PROTECT" (HUSRБ / 1602/12/0132 - 5.7.3.), which was concluded on 30.3.2018., in Novi Sad between: PROVINCIAL SECRETARIAT FOR URBAN PLANNING AND ENVIRONMENTAL PROTECTION, represented by project manager Nemanja Erceg, on the one hand, as a client, and the Faculty of Agriculture Novi Sad in Novi Sad, Trg Dositeja Obradovića 8, represented by the Prof. dr Nedeljko Tica, dean. We send you the report on conducted scientific - research activities for the first three months of the contract period.

I REPORT

SERVICES OF ANALYZING DEPOSITED SEED (SEED BANK) OF INVASIVE SPECIES IN SOIL IN NATURE PROTECTED AREA FOR PROJECT "PROTECT"

REFERENCE NUMBER: HUSRB/1602/12/0132 - 5.7.3.

1. Description of activity

| Location | Nature Reserve „Ludaško jezero“ | Nature Park "Palić" | Special Nature Reserve "Selevenjske pustare"/forest | Landscape of Outstanding Features „Subotička peščara"/forest |
|---|---------------------------------|----------------------|---|--|
| <hr/> | | | | |
| Time of activity | 17.05.2018. 7-15h | 23.05.2018. 7-15h | 29.05.2018/30.05.2018. 7-15h | 29.05.2018/30.05.2018. 7-15h |
| Weather condition Temperature/humidy | 17°C/18% | 21,7°C/34% | 22,3°C/81% 21,8°C/78% | 22,3°C/81% 21,8°C/78% |
| Nº of soil sampling | 25 | 17 | 14/15 | 15/14 |
| Nº of identified seed | 52 | 45 | 41 | 39 |
| Nº of identified invasive seed | 9 | 11 | 12 | 8 |

2. Description of methodology

Soil sampling was carried out in locations of four protected areas in north of Serbia Landscape of Outstanding Features "Subotička peščara", Nature Park "Palić", Nature Reserve "Ludaško jezero" and Special Nature Reserve "Selevenjske pustare". The depth at which samples were taken in each location was 0-10 cm. The sampling of soil was done in XX-XX, with a probe of the same volume. In the laboratory conditions, soil samples were sieved through sieves of various diameters. After that weed seeds separated in the sample from plant and other material and the identification of seeds was carried out. Identifying the seeds and determining their quantity was carried out with microscopes and determiners.

In first report shows soil sampling at the beginning of the first vegetation season.

3. Results

Weed seed banks contribute to the spread of both annual (Steinmann and Klingebiel, 2004) and perennial weed species (Blumenthal and Jordan, 2001), which affects the spread of the weed community in general over the years. What has to be taken into account in the study of weed seed banks in soil is that they are only a part of a complex and dynamic system consisting of soil (Otto et al., 2007), plants, animals and microorganisms (Chee-Sanford et al., 2006). The main biological characteristics of weeds which enable their viability are high seed production, a high potential for vegetative propagation, and the potential for rapid expansion and adaptation to adverse ecological conditions (Konstantinović et al., 2012). Seeds can be dispersed mechanically by wind, water, animals or cultivation machinery, all of which contribute to the regular replenishment of weed seed banks. The most significant factor for the appearance of a new seed into the weed seed bank is the time when the seeds are released by the dominant weed species within the local plant communities (Konstantinović et al., 2008). In addition, weed density is limited due to the risk of soil compression during wet winter seasons. All of these factors can have an impact on the appearance of weeds and on the composition of seed banks (Anderson et al., 1998; Clements et al., 1996; Le'ge're et al., 2005; Smith and Gross 2006). Annual fluctuation of outside factors significantly influences weed seedbanks (Harbuck et al., 2009). Understanding the nature of seedbanks is a necessary prerequisite for studying plant population dynamics, or for setting up programs of weed control (Ambrosio et al., 2004).

Nature Reserve "Ludaško jezero"

At the location of Nature Reserve "Ludaško jezero" studied 52 weed species were identified: *Amaranthus retroflexus*, *Polygonum aviculare*, *Portulaca oleracea*, *Senecio vulgaris*, *Setaria italica*, *Chenopodium hybridum*, *Setaria glauca*, *Brassica hirta*, *Dianthus pontederae*, *Trifolium repens*, *Solanum nigrum*, *Datura stramonium*, *Raphanus raphanistrum*, *Silene vulgaris*, *Centaurea cyanus*, *Stellaria media*, *Sambucus nigra*, *Echinochloa crus-galli*, *Iva xanthifolia*, *Bromus molis*, *Stachys anuua*, *Chenopodium album*, *Taraxacum officinale*, *Poa trivialis*, *Sinapis alba*, *Salvia officinalis*, *Daucus carota*, *Veronica hederifolia*, *Matricaria chamomilla*, *Euphorbia helioscopia*, *Crataegus* sp., *Celtis occidentalis*, *Polygonum persicaria*, *Delphinium consolida*, *Polygonum lapathifolium*, *Hibiscus trionum*, *Rumex crispus*, *Avena fatua*, *Ambrosia artemisiifolia*, *Carex hirta*, *Convolvulus arvensis*, *Rubus caesius*, *Hordeum murinum*, *Festuca pratensis*, *Sonchus arvensis*, *Sinapis arvensis*, *Lolium multiflorum*, *Carduus acanthoides*, *Capsella bursa-pastoris*, *Canabis sativa*, *Phacelia campanularia* and *Ajuga repens* (table 1).

Table 1: Determined weed seeds at Special at Nature Reserve „Ludaško jezero“

| Weed seeds | Number of soil sampling | | | | | | | | | | | | | | | | | | | | | | | | | SUM | no m2 | |

The seeds of invasive weeds at the location of Nature Reserve "Ludaško jezero" were identified: *Amaranthus retroflexus*, *Portulaca oleracea*, *Setaria italica*, *Datura stramonium*, *Echinochloa crus-galli*, *Iva xanthifolia*, *Celtis occidentalis*, *Ambrosia artemisiifolia* and *Lolium multiflorum* (Table 1).

Table 2: Determined invasive weed seeds at Special at Nature Reserve „Ludaško jezero“

| Weed seeds | SUM | no m ² |
|--------------------------------|-----|-------------------|
| <i>Amaranthus retroflexus</i> | 542 | 43226,99 |
| <i>Ambrosia artemisiifolia</i> | 2 | 159,51 |
| <i>Celtis occidentalis</i> | 6 | 478,53 |
| <i>Datura stramonium</i> | 40 | 3190,18 |
| <i>Echinochloa crus-galli</i> | 5 | 398,77 |
| <i>Iva xanthifolia</i> | 1 | 79,75 |
| <i>Lolium multiflorum</i> | 4 | 319,02 |
| <i>Portulaca oleracea</i> | 483 | 38521,47 |
| <i>Setaria italica</i> | 21 | 1674,85 |

The average number of weeds at the location Special at Nature Reserve „Ludasko jezero“ in the soil profil 0-10 cm is in the range of 79,75 to 43226,99 seeds per m² respectively. The weed seed bank contain several dominant species in all samples. *Amaranthus retroflexus* and *Portulaca oleracea* were one of the most numerous at the locality. *Amaranthus retroflexus* is the weed species with the highest number of selected seed from the samples (43226,99 seeds per m²), followed by *Portulaca oleracea* (38521,47 seeds per m²), *Datura stramonium* (3190,18 seeds per m²), *Setaria italica* (1674,85 seeds per m²), *Celtis occidentalis* (478,53 seeds per m²), *Echinochloa crus-galli* (398,77 seeds per m²), *Lolium multiflorum* (319,02 seeds per m²), *Ambrosia artemisiifolia* (159,51 seeds per m²) and *Iva xanthifolia* (79,75 seeds per m²).

Table 4: Determined invasive weed seeds at Nature Park „Palić“

| Weed seeds | SUM | no m ² |
|-------------------------------|-----|-------------------|
| <i>Amaranthus retroflexus</i> | 37 | 2950,92 |
| <i>Asclepias syriaca</i> | 15 | 1196,32 |
| <i>Celtis occidentalis</i> | 69 | 5503,07 |
| <i>Datura stramonium</i> | 36 | 2871,17 |
| <i>Galinsoga parviflora</i> | 2 | 159,51 |
| <i>Lolium multiflorum</i> | 14 | 1116,56 |
| <i>Matricaria discoidea</i> | 13 | 1036,81 |
| <i>Portulacae olaraceae</i> | 11 | 877,30 |
| <i>Setaria italica</i> | 19 | 1515,34 |
| <i>Veronica persica</i> | 2 | 159,51 |
| <i>Vicia articulata</i> | 2 | 159,51 |

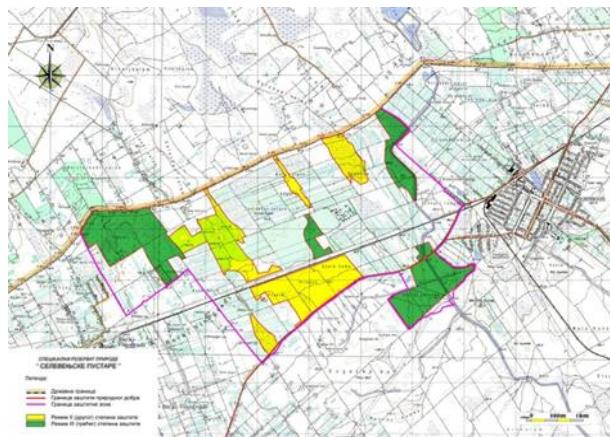

The average number of weeds at the location Nature Park „Palić“ in the soil profil 0-10 cm is in the range of 159,51 to 5503,07 seeds per m² respectively. The weed seed bank contains several dominant species in all samples. *Amaranthus retroflexus* and *Celtis occidentalis* were one of the most numerous at the locality. *Celtis occidentalis* is the weed species with the highest number of selected seed from the samples (5503,07 seeds per m²), followed by *Amaranthus retroflexus* (2950,92 seeds per m²), *Datura stramonium* (2871,17 seeds per m²), *Setaria italica* (1515,34 seeds per m²), *Asclepias syriaca* (1196,32 seeds per m²), *Lolium multiflorum* (1116,56 seeds per m²), *Matricaria discoidea* (1036,81 seeds per m²), *Portulacae olaraceae* (877,30 seeds per m²) and *Galinsoga parviflora*, *Veronica persica*, *Vicia articulata* had same number of determinate weed seeds, 159,51 seeds per m² (table 4).

Picture 6-9: Sampling of soil at Special at Nature Park „Palić“

Special Nature Reserve „Selevenjske pustare“

At the location of Special Nature Reserve „Selevenjske pustare“ studied 41 weed species were identified: *Amaranthus retroflexus*, *Polygonum aviculare*, *Capsella bursa-pastoris*, *Setaria italica*, *Setaria viridis*, *Datura stramonium*, *Rubus caesius*, *Ranunculus repens*, *Lolium multiflorum*, *Iris* spp., *Polygonum convolvulus*, *Lolium perenne*, *Oxalis pes-caprae*, *Bulbocodium* spp., *Raphanus raphanistrum*, *Centaurea cyanus*, *Portulaca oleracea*, *Stellaria media*, *Ambrosia artemisiifolia*, *Veronica hederifolia*, *Robinia pseudoacacia*, *Melilotus* spp., *Veronica persica*, *Lolium rigidum*, *Avena fatua*, *Celtis occidentalis*, *Chenopodium album*, *Urtica dioica*, *Bromus mollis*, *Asclepias syriaca*, *Delphinium consolida*, *Daucus carota*, *Matricaria discoidea*, *Matricaria chamomilla*, *Brassica nigra*, *Verbascum* spp., *Rhinanthus* spp., *Senecio vulgaris*, *Fraxinus L.*, *Chenopodium hybridum* and *Pinus nigra* (table 5).

Map 3 - Special Nature Reserve „Selevenjske pustare“

The seeds of invasive weeds at the location of Special Nature Reserve „Selevenjske pustare“ were identified: *Amaranthus retroflexus*, *Asclepias syriaca*, *Matricaria discoidea*, *Robinia pseudoacacia*, *Celtis occidentalis*, *Veronica persica*, *Setaria italica*, *Lolium multiflorum*, *Datura stramonium*, *Fraxinus pennsylvanica*, *Portulaca oleracea* and *Ambrosia artemisiifolia* (table 6).

Table 5: Determined weed seeds at Special Nature Reserve „Selevenjske pustare“

| Weed seeds | Number of soil sampling | | | | | | | | | | | | | | | | | | | | | SUM | NO m ² | | | | | | | | |

F-forest

The average number of weeds at the location Special Nature Reserve „Selevenjske pustare“ in the soil profil 0-10 cm is in the range of 159,51 to 5503,07 seeds per m² respectively. The weed seed bank contains several dominant species in all samples. *Amaranthus retroflexus* and *Portulaca oleracea* were one of the most numerous at the locality. *Amaranthus retroflexus* is the weed species with the highest number of selected seed from the samples (19858,90 seeds per m²), followed by *Portulaca oleracea* (8773,01 seeds per m²), *Matricaria discoidea* (1515,34 seeds per m²), *Setaria italica* (1196,32 seeds per m²), *Robinia pseudoacacia* (1116,56 seeds per m²), *Celtis occidentalis* (638,04 seeds per m²), *Lolium multiflorum* (558,28 seeds per m²), *Veronica persica* (319,02 seeds per m²), *Datura stramonium* (239,26 seeds per m²), and *Ambrosia artemisiifolia*, *Asclepias syriaca*, *Fraxinus pennsylvanica* had same number of determinate weed seeds 79,75 seeds per m² (table 6).

Table 6: Determined invasive weed seeds at Special Nature Reserve „Selevenjske pustare“

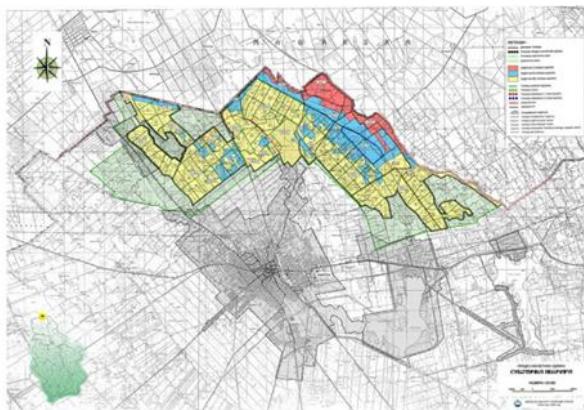

| Weed seeds | SUM | no m2 |
|--------------------------------|-----|----------|

F-forest

The average number of weeds at the location Landscape of Outstanding Features „Subotička peščara“ in the soil profil 0-10 cm is in the range of 79,75 to 16828,22 seeds per m² respectively. The weed seed bank contains several dominant species in all samples. *Portulaca oleracea* and *Amaranthus retroflexus* were one of the most numerous at the locality. *Portulaca oleracea* is the weed species with the highest number of selected seed from the samples (16828,22 seeds per m²), followed by *Amaranthus retroflexus* (13717,79 seeds per m²), *Robinia pseudoacacia* (3828,22 seeds per m²), *Setaria italica* (1914,11 seeds per m²), *Celtis occidentalis* (1196,32 seeds per m²), *Echinochloa crus-galli* (79,75 seeds per m²), and *Asclepias syriaca*, *Erodium ciconium* had same number of determinate weed seeds 398,77 seeds per m² (table 8).

Table 8: Determined invasive weed seeds at Landscape of Outstanding Features „Subotička peščara“

| Weed seeds | SUM | no m ² |
|-------------------------------|-----|-------------------|
| <i>Amaranthus retroflexus</i> | 172 | 13717,79 |
| <i>Asclepias syriaca</i> | 5 | 398,77 |
| <i>Celtis occidentalis</i> | 15 | 1196,32 |
| <i>Echinochloa crus-galli</i> | 1 | 79,75 |
| <i>Erodium ciconium</i> | 5 | 398,77 |
| <i>Portulaca oleracea</i> | 211 | 16828,22 |
| <i>Robinia pseudoacacia</i> | 48 | 3828,22 |
| <i>Setaria italica</i> | 24 | 1914,11 |

Analyzing deposited seed (seed bank) of invasive species in soil is made in the representative locations of four protected areas in the north of Serbia Landscape of Outstanding Features „Subotička peščara“, Nature Park „Palić“, Special Nature Reserve „Ludaško jezero“ and Special Nature Reserve „Selevenjske pustare“. In the table below (table 9) presents the determined seed invasive weeds tested at 4 protected areas. There was a very large number of weed seeds a few weed species. At all four protected location have determined the presence of 4 weed seeds a very large number (*Amaranthus retroflexus*, *Celtis occidentalis*, *Portulaceae olaraceae*, *Setaria italica*). Other weed species were also determined in large numbers or not at each test location.

Table 9: Invasive seed of weeds at 4 protected areas

| Invasive weed seeds | SNRLJ ¹ | NPP ² | SNRSP ³ | LOFSP ⁴ |
|--------------------------------|--------------------|------------------|--------------------|--------------------|
